

### DICE Baseball Automated Stealing System

CHOOSE EITHER SYSTEM A OR B

**System A: Take the ones digit (white die roll) when a player reaches base and compare to the chart below.**

White Die Roll	Steal Attempt of 2B	Steal Attempt of 3B	Double Steal Attempt (2B/3B)
0	None	None	None
1	None	None	None
2	None	None	None
3	None	None	None
4	None	None	None
5	None	None	None
6	Any 80+ rated steals	None	None
7	Any 70+ rated steals	None	None
8	Any 60+ rated steals	Any 70+ rated steals	None
9	Any 50+ rated steals	Any 60+ rated steals	Double steal only if rated 50/60

Rating applies to adjusted rating. So take the base runners STEAL rating and subtract that from the pitchers HOLD rating and the catchers THROWING ARM and that is the runners adjusted rating. If this rating is 90 or higher, the runner will attempt to steal 2B every time he is on base and there is no runner on 2B. Only check this chart once depending on the base situation. Always start with Double Steal Attempt and work your way back. For example if there are runners on 1B and 2B and your white die roll was an 8, first check the Double Steal Attempt Chart. It says none. That means that both runners will not steal. Next go to the Steal Attempt of 3B Chart and we see that next to 8 it says that any rated 70+ steals. This means if the runner on 2B has an adjusted STEAL rating of 70 or higher, he will attempt to steal 3B. Do not forget that any attempt to steal 3B starts with a -30 adjustment. Do not forget to subtract this in when factoring the runners STEAL rating. On the Double Steal Attempt Chart, next to 9 it says Double Steal only if rated 50/60. This means the only way your runners will attempt a double steal is if the runner on 1B has at least a 50+ adjusted STEAL rating and the runner on 2B has at least a 60+ adjusted STEAL rating.

**System B: Whenever a player reaches base by way of an even number check this chart and roll again.**
